

Tubes and cables finder

The tubes and cables finder is intended for the search of underground metal lines (power electric cables and metal tubing).

The device gives a possibility before caring out excavation works to convince in absence of high voltage cables or electric lines, the damage of which may cause breakdowns and accidents.

The finder is intended for usage in field conditions in the range of air temperature from minus 20°C to +40°C, relative humidity of 85 %; and atmospheric pressure from 600 to 800 mm Hg.

SPECIFICATIONS:

Maximum depth of location of lines searching, m	2
The precision of locating of the lines (one meter depth), m	0,2
Indication	Visual (the deviation of the needle of the indicator) and audio (the change of the frequency of the sound).
The power supply is made from two batteries with the voltage of 4,5 V (3R12 type)	
Weight, kg	Not more than 1,8
